1: Scope and key terms

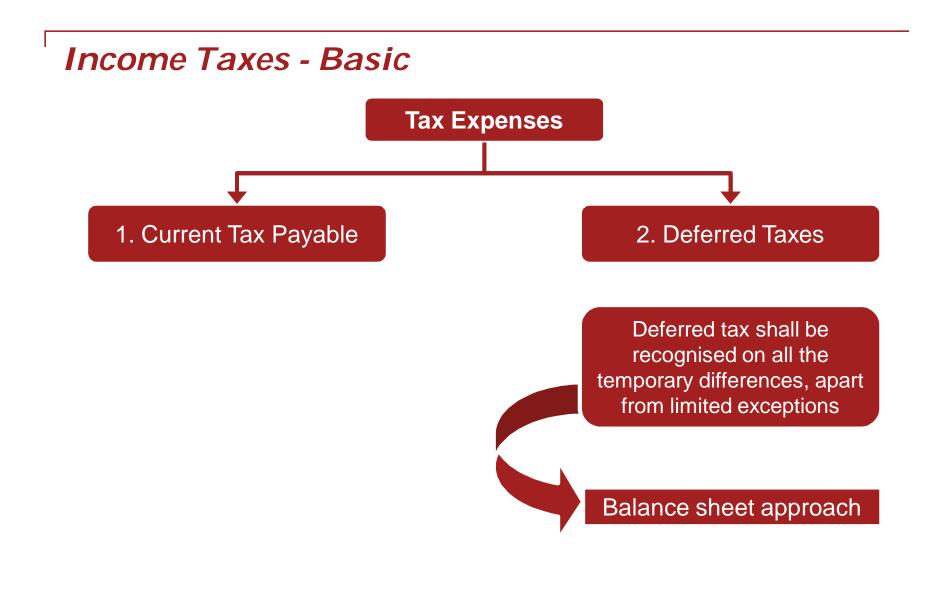

Income Taxes

Objective

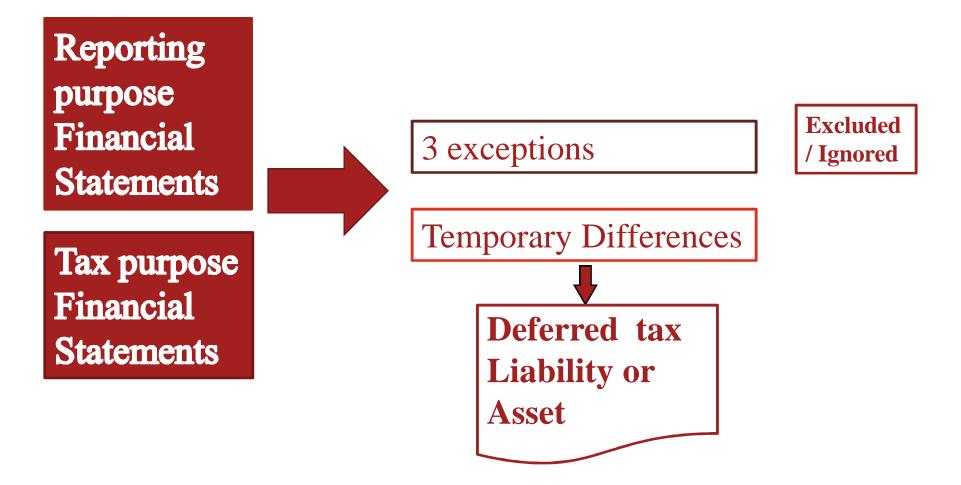

- Prescribe accounting treatment for current income taxes and future tax consequences i.e. deferred taxes.
- Deferred tax effects on business combinations and unused tax losses or credit.
- Presentation and disclosure requirements

Scope

- Apply to all income taxes (domestic & foreign) based on "taxable profit"
- Includes withholding tax (payable by subsidiary on distribution by parent)
- Excludes other taxes (VAT/business taxes) and method of accounting for government grants.

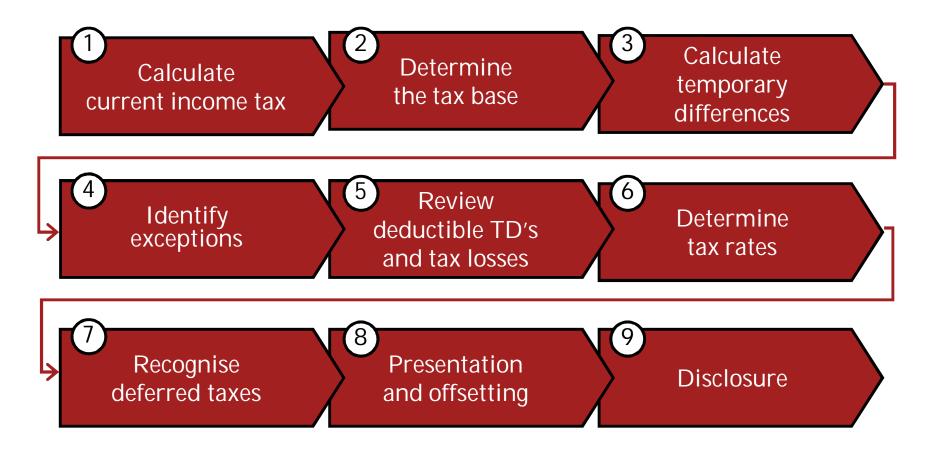

Income Taxes - Basic

2: Recognition and Measurement Principles

Nine step approach to calculating deferred tax

Recognition

- Current tax for current and prior periods shall, to the extent **unpaid**, be recognised as a **liability**.
- If the amount already paid in respect of current and prior periods exceeds the amount due for those periods, the **excess** shall be recognised as an **asset**.
- The benefit relating to a tax loss that can be carried back to recover current tax of a previous period shall be recognised as an asset.

Measurement Measured at the amount expected to be paid to • (recovered from) the taxation authorities, using the tax rates (and tax laws) that have been enacted or Current substantively enacted by the end of the reporting period. tax Measured at the tax rates that are expected to apply to the period when the assets is realized or the liability is settled, based on the tax rates (and tax Deferred laws) that have been enacted or substantively enacted by the end of the reporting period. tax DTA/DTL should not be discounted.

Understanding Balance Sheet Method

How to Compute deferred tax?

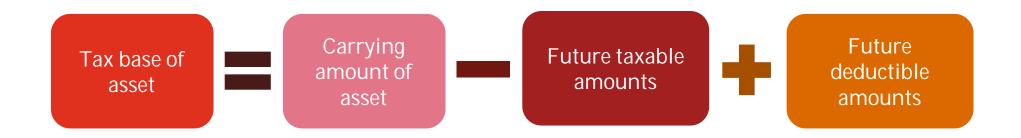

Apply the substantively enacted tax rate to calculate Deferred tax asset / liability

Tax Base of an Asset

Tax base of an asset is "the amount that will be deductible for tax purposes against any taxable economic benefits that will flow to an entity when it recovers the carrying amount of the asset".

Tax base = Future deductible amount

Check your understanding - Tax Base of an Assets

	Scenarios	Tax Base
1	A machine cost Rs.100. For tax purposes, depreciation of Rs.30 has already been deducted in the current and prior periods and the remaining cost will be deductible in future periods, either as depreciation or through a deduction on disposal. Revenue generated by using the machine is taxable, any gain on disposal of the machine will be taxable and any loss on disposal will be deductible for tax purposes.	Rs. 70
2	Interest receivable has a carrying amount of Rs.100. The related interest revenue will be taxed on a cash basis.	Nil
3	Trade receivables have a carrying amount of Rs.100. The related revenue has already been included in taxable profit (tax loss).	Rs. 100
4	Inventory of Rs. 100 in the balance sheet will be recovered in the next period through transfer to cost of sales.	Rs. 100
5	A loan receivable has a carrying amount of Rs.100. The repayment of the loan will have no tax consequences.	Rs. 100

Income Taxes

Tax Base of a Liability

Tax base of a liability is "its carrying amount, less any amount that will be deductible for tax purposes in respect of that liability in future periods"

Tax base = Future taxable amount

Check your understanding - Tax Base of a Liability

	Scenarios	Tax Base
1	Current liabilities include accrued expenses with a carrying amount of Rs.100. The related expense will be deducted for tax purposes on a cash basis.	Nil
2	Current liabilities include interest revenue received in advance, with a carrying amount of Rs.100. The related interest revenue was taxed on a cash basis.	Nil
3	Current liabilities include accrued expenses with a carrying amount of Rs.100. The related expense has already been deducted for tax purposes.	Rs. 100
4	Current liabilities include accrued fines and penalties with a carrying amount of Rs.100. Fines and penalties are not deductible for tax purposes.	Rs. 100
5	A loan payable has a carrying amount of Rs.100. The repayment of the loan will have no tax consequences.	Rs. 100

Understanding Temporary difference

Temporary differences are the differences between the carrying amount of an asset or liability and its tax base.

The following are examples of temporary differences:

- a) An item of income or expenditure is included in accounting profit of the period, but recognised in taxable profit in later periods, eg gratuity accrual.
- Assets are revalued and no equivalent adjustment is made for tax purposes. b)
- c) The tax base of an asset/liability on initial recognition differs from initial carrying amount eq. when an entity benefits from non-taxable government grants related to assets.
- d) Identifiable assets & liabilities of business combination recognised at fair value but no adjustment for the same is made for tax purpose.
- Goodwill arises in business combination. e)
- f) Difference in carrying amount and tax base of investment in subsidiaries, JV, branches. Income Taxes May 2015

Check your understanding– Temporary difference

	Scenarios	Temporary difference
1	A machine has cost Rs. 200 and now has a net book value of Rs. 150. For tax purposes, the cumulative depreciation (i.e. total tax allowances to date) is Rs. 110.	(60) DTL
2	An entity recognises a liability of Rs. 100 for product warranty costs. For tax purposes, the warranty costs are deductible only when claims are made.	100 DTA
3	An entity has taken out a foreign currency loan of \$ 100 that is recorded at Rs. 6,250. At the reporting date, the carrying amount of the loan is Rs. 5,750. The unrealised exchange gain of Rs. 500 is included in profit or loss, but will be taxable when the gain is realised on repayment of the loan.	(500) DTL
4	Provision for doubtful debts made in accounting books for Rs. 200 but same will be allowed for tax purpose only when debts will be written off.	200 DTA

Temporary Difference Exceptions (Only three)

Initial recognition of goodwill arising in a business combination Initial recognition of an asset or liability in a transaction that is not a business combination and that affects neither accounting profit nor taxable profit

Investment in subsidiaries, branches, associates and joint venture

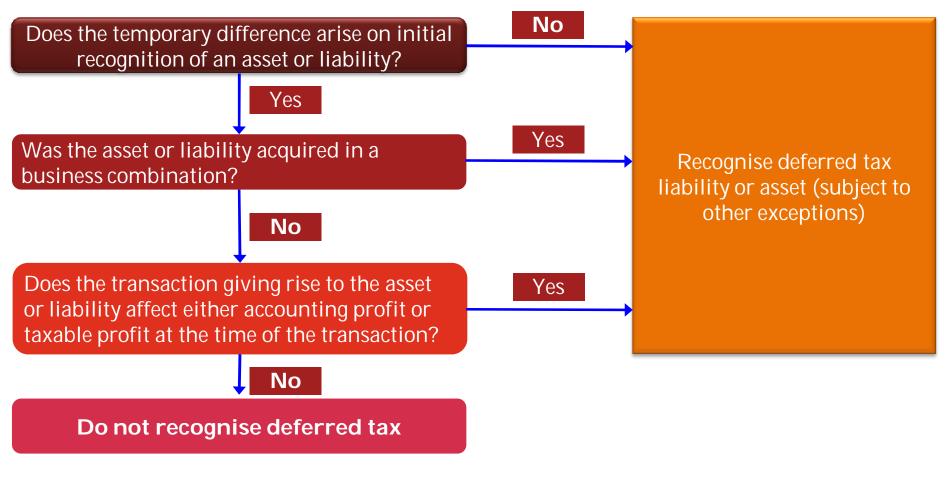

Goodwill is a residual amount and recognition of DTL on goodwill will increase the carrying amount of goodwill that would not add to the relevance of financial reporting

Income Taxes

May 2015 Slide 17

Temporary Difference Exceptions (Contd.)

Temporary difference arising on initial recognition of an asset or liability

Income Taxes

Temporary differences-Where to give effect

Deferred Tax effect: Account for deferred tax consequences of transaction in same way that it account for transaction themselves.

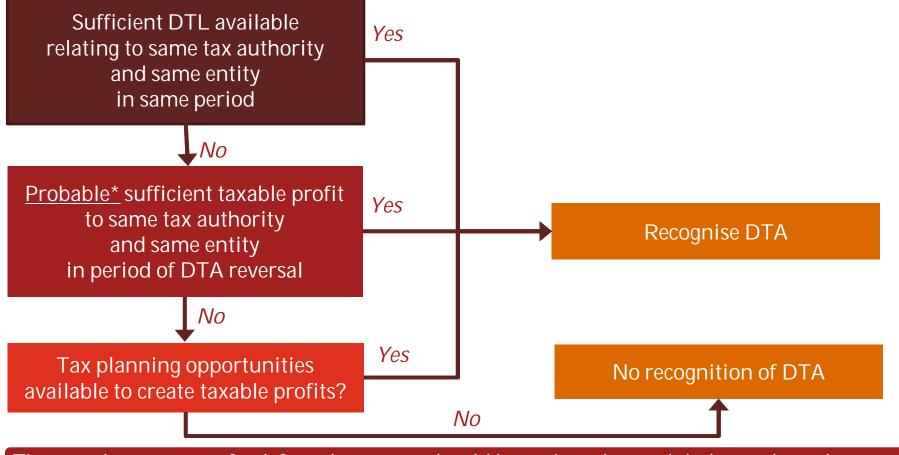

Situation	Where deferred tax is recorded
General rule	Income statement
Adjustment to FV on acquisition	Adjust goodwill
Transaction or event recognised in equity	Equity

Check your understanding – Where to give deferred tax effect

	Scenarios	Effect in
1	Temporary difference due to depreciation	P&L
2	A change in carrying amount arising from the revaluation of property, plant and equipment.	OCI
3	an adjustment to the opening balance of retained earnings resulting from either a change in accounting policy that is applied retrospectively or the correction of an error.	Equity
4	Adjustment to fair value on acquisition	Adjust goodwill
5	Temporary difference on MTM of derivative contract designated in hedge relationship (Cash flow hedge)	OCI

Income Taxes

Deferred Tax Asset Recognition

The carrying amount of a deferred tax asset should be reviewed at each balance sheet date

Tax planning opportunity are not offset against DTL they are specifically used for DTA

Income Taxes

Deferred Tax Asset – Certain points

• Future taxable profit

The future realisation of deferred tax assets depends on the expectation of sufficient taxable profit of the appropriate type (trading profit or capital gain) being available for the offset of deductible temporary differences or unused tax losses

Where there are insufficient taxable temporary differences against which the deferred tax asset can be offset, it is necessary to consider the likelihood that taxable profits will arise in the same period(s) as the reversal of the deductible temporary differences.

• Re-assessment of recoverability at each balance sheet date

Deferred Taxes on Business combination

- Assets acquired and liabilities assumed are recognised at fair values at the acquisition date.
- However, the tax bases of individual assets remains at cost to the previous owner.
- Changing the carrying amount (to fair value) affects temporary differences and accordingly deferred taxes.
- These tax consequences impact goodwill and are recognised when accounting for the business combination.
- However, no deferred tax liability is recognised on the initial recognition of goodwill itself.

Unused tax losses and unused tax credits

- DTA is recognised for unused losses and unused tax credits to the extent it is **probable** that future taxable profit will be available against which it can be utilised.
- In case when company has a **history of recent losses**, then recognise only to the extent of sufficient taxable temporary differences or convincing other evidence that future taxable profit will be available.
- Nature of evidence supporting its recognition needs to be disclosed.

Check your understanding - Unused tax losses and unused tax credits

Q. When assessing the recoverability of deferred tax assets arising from the carry forward of unused tax losses and unused tax credits, should a deferred tax asset be recognised where the amount of probable future taxable profit available is sufficient only for a portion, rather than the total, of the unused tax losses or unused tax credits?

Answer: Yes

Ind AS 12.34 states the following:

A deferred tax asset shall be recognised for the carryforward of unused tax losses and unused tax credits to the extent that it is probable that future taxable profit will be available against which the unused tax losses and unused tax credits can be utilised.

Applicable Tax Rate

- Deferred tax to be measured based on tax rates and laws that have been enacted or substantively enacted at the balance sheet date
- Impact of the changes in tax rates to be recognised
- Expected manner of recovery or settlement of an asset or a liability depend on the manner in which the recovery of the asset or settlement of the liability takes place.

An entity shall measure deferred tax assets and liabilities using the tax rates and tax bases that are consistent with the manner in which the entity's management expects, at the balance sheet date, to recover or settle the carrying amount of assets and liabilities.

3: Presentation & disclosures

Disclosures

- Major component of tax expenses (income) to be separately disclosed such as :
 - ✓ Current tax expense
 - ✓ Prior period adjustment
 - ✓ Deferred expense/income
- Aggregate current and deferred tax relating to items charged or credited directly to equity
- Income tax relating to each component of other comprehensive income
- Reconciliation
 - ✓ a numerical reconciliation between tax expense (income) and the product of accounting profit multiplied by the applicable tax rate, disclosing also the basis on which the applicable tax rate is computed; or

Disclosures (contd.)

- ✓ a numerical reconciliation between the average effective tax rate and the applicable tax rate, disclosing also the basis on which the applicable tax rate is computed;
- An explanation of **changes in the applicable tax rate** compared to the previous accounting period;
- Amount and expiry date, if any of deductible temporary differences, unused losses and credits for which no DTA recognised
- Aggregate amount of temporary differences associated with investments in subsidiaries, branches and associates and interests in joint ventures, for which deferred tax liabilities have **not been** recognised;

Disclosures (contd.)

- In respect of discontinued operations, the tax expense relating to:
 - \checkmark the gain or loss on discontinuance; and
 - ✓ the profit or loss from the ordinary activities of the discontinued operation for the period, and corresponding amounts for each prior period presented;
- Amount of deferred tax asset recognised and nature of evidence supporting its recognition, when:
 - ✓ the utilisation of the deferred tax asset is dependent on future taxable profits in excess of the profits arising from the reversal of existing taxable temporary differences; and
 - ✓ the entity has suffered a loss in either the current or preceding period (history of losses)

Disclosures (contd.)

- in respect of each type of temporary difference, and in respect of each type of unused tax losses and unused tax credits:
 - the amount of the deferred tax assets and liabilities recognised in the balance sheet for each period presented;
 - ✓ the amount of the deferred tax income or expense recognised in profit or loss, if this is not apparent from the changes in the amounts recognised in the balance sheet;
- the amount of income tax consequences of dividends to shareholders of the entity that were proposed or declared before the financial statements were approved for issue, but are not recognised as a liability in the financial statements;

Decoding Rate Reconciliation

	Amount (Rs.)
Accounting profit	2,500
Tax @ domestic rate of 30%	750
Tax effect of expenses that are not deductible for tax purpose	60
Effect of lower tax rates in country B	(50)
Tax expenses	760

Note:

- The deferred taxes needs to be computed based on tax provisions and not tax returns or revised returns.
- The above rate reconciliation will ensure accuracy of the Deferred Tax Computation. The rate reconciliation could also reflect prior period adjustments and rate changes.

Presentation - Offset

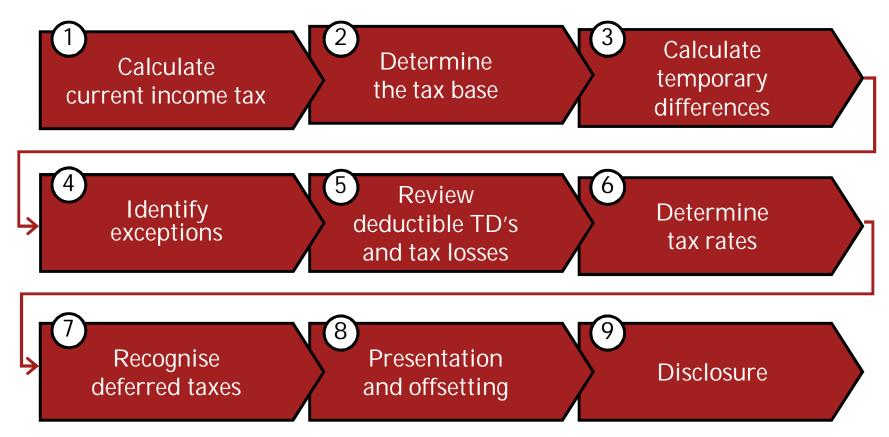

An entity shall offset deferred tax assets and deferred tax liabilities if, and only if:

- (a) the entity has a legally enforceable right to set off current tax assets against current tax liabilities
- (b) the deferred tax assets and the deferred tax liabilities relate to income taxes levied by the same taxation authority on either:
 - (i) the same taxable entity; or
 - (ii) different taxable entities which intend either to settle current tax liabilities and assets on a net basis, or to realise the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax liabilities or assets are expected to be settled or recovered.

4: Summary – Nine step approach

Income Taxes

Summary – Nine step approach to calculating deferred tax

5: Key GAAP differences – Ind AS vs. Indian GAAP

Key GAAP differences – Ind AS vs. Indian GAAP

Particulars	Ind AS	Indian GAAP
Approach for deferred taxes	Balance sheet approach (Temporary differences)	Profit and loss approach (timing differences)
Recognition of taxes in OCI or Equity	Tax on items recognised in OCI or directly in equity is also recorded in OCI or equity, as appropriate	No specific guidance
Recognition of DTA on unused tax losses, etc.	DTA is recognised for unused losses and tax credits to the extent it is probable that future taxable profit will be available	
Investment in Subsidiary, JV, branch, etc.	 DTL for all taxable temporary difference are recognised except to the extent: Parent control timing of reversal of difference, and Probable that difference will not reverse in foreseeable future 	No DTL – Simple aggregation from separate financial statements of subsidiary and no adjustment on consolidation.

Key GAAP differences – Ind AS vs. Indian GAAP (contd.)

Particulars	Ind AS	Indian GAAP
Deferred tax in business combination	Deferred tax to be recorded on fair value adjustment on acquisition.	No specific guidance
Deferred tax on unrealised intra- group profits	Recognised at buyer's rate	Not recognised
Disclosures	Certain additional disclosures like Reconciliation, details of tax holiday and expiry of losses, unrecognised DTL etc. are required.	Not required
